IBM Quantum Spring Challenge: Dynamic Circuits

IBM **Quantum**

May 17-24

[Register Here →](#)

Every year, IBM Quantum releases public challenges as part of our ongoing global education efforts. The Spring Challenge is free to participate in, and is meant to give participants a deeper understanding of a specific quantum topic. This year's Challenge focuses on Dynamic Circuits, a technology that makes it easier to run more advanced quantum algorithms.

This event will feature 5 Labs, each with exercises and tutorial content to get participants started using Dynamic Circuits. We're also thrilled to showcase the most advanced hardware: IBM Quantum will allow all registered participants to run circuits on a 127-qubit IBM Quantum Eagle processor.
